

REMA Shelf Magazine

The ultimate efficiency increase for your machining centre

The REMA Shelf Magazine

- the only **tool-changing system to completely eliminate changeover times**
- and it can theoretically **administer an unlimited number of tool locations.**

Area of application

- Fully automatic tool-changing system
 - **Machining centre** and
 - **Lathe and milling centre**
- For **high** and **very high** requirement **tool locations (>200).**
- For efficient administration of **complete tool inventories** within a production process.

Method of functioning

- **All tools**, for example, are sorted according to tool sets and maintained in **mobile (!) shelf magazines.**
- By the **decoupling of magazine and machine**, the magazine can be changed during on-going operation **without interruption.**
- A handling mechanism brings the individual tools from the magazine to **a tool buffer** before they are transferred **without delay** by the tool changer to the machine.
